## WINDSURFING BOARD RANGE

This presentation gives you a brief overview of the Goya products available this year. For more information and up to date news, events and our blog, please visit us online.

Goya Windsurfing is a rider driven company, the proof is in our products. The passion for windsurfing is shared by everyone involved in making this brand possible. We love to progress, as riders and as a company. Evolving our products is the simple result of this motivation.

At Goya Windsurfing we develop the entire windsurfing experience: boards, sails and the rig components you need to enjoy what we consider the most dynamic sport on earth. Our priority is to offer premium performance in a consolidated range of gear designed to meet any windsurfer's needs anywhere in the world, any time.

# 2012 Custom

## PRO QUAD SERIES™

The new CUSTOM Quads bring dedicated surfing experience into wavesailing, with a wider wind range, more drive, added upwind and all around faster riding. From hard core down the line conditions to onshore chop, these boards are built to go beyond what you thought it was possible. The Goya Quad concept allows you to increase the volume of the board about 5 liters above what you would normally ride, with absolutely no loss of control in the high end. The result is a board with a massively expanded wind range- that extra volume will keep you moving through lulls that a lower volume board might slow down in.

The Custom PRO features generous carbon patching from in front of the mast track all the way into the tail, as well as beneath and around the padded areas.

**PRO™ CONSTRUCTION** is our most advanced built, combining light weight, a crisp feel and excellent durability all into one lay-up. Driven by the worldwide, year round research and passion of our team and customers, The Pro Construction evolves and improves constantly. The result is the best weight s with the least warranty issues in the industry. All Pro boards come in distinct colors and a lightly sanded finish.

# 2012 Air

## PRO FREESTYLE SERIES™

This airborne Freestyle board, is exclusively designed for the generation of freestyle moves that we now see on the water and aspire ourselves. These boards are not just tested but used and abused daily by professional Freestyle riders on Maui and around the globe.

The all new short shape combines extreme power and pop for air moves while keeping full rail carving capabilities. The rocker with a longer flat section is only surpassed by our Freerace line, focussing on early planning and top end speed. The gradual nose rocker has been reduced for control and ease when switching from tail to nose glides.

The Air PRO features generous carbon patching from in front of the mast track all the way into the tail, as well as beneath and around the padded areas.

Further design features include an increased tail volume and bevel for reverse sliding tricks as well as Freestyle insert positions with double screws on the back strap.

**PRO™ CONSTRUCTION** is our most advanced built, combining light weight, a crisp feel and excellent durability all into one lay-up. Driven by the worldwide, year round research and passion of our team and customers, The Pro Construction evolves and improves constantly. The result is the best weight s with the least warranty issues in the industry. All Pro boards come in distinct colors and a lightly sanded finish.

# 2012 Surf

## ECO BEGINNER SERIES™

The focus of this board is to get anyone a fast entry into the windsurfing feeling and allowing every rider to keep improving on the same board. Learning to get in the straps, jibe, trim upwind or race downwind. A balanced board for beginners that can also be turned into one of the most used boards in the quiver of advanced riders. Not to forget the Stand Up Paddle qualities of this wonderful platform.

A wide & short fin helps first time water starts in shallow sections while still maintaining enough fin area once you are planing. Additionally, the all new fully retractable AllGaier® dagger board brings the best of both worlds. You can choose to either have it hidden away, tucked inside the board while riding around, or have it down for first time riders or for trimming upwind on the lighter wind days. Having the daggeboard down maximizes stability while learning to uphaul.

The board features a full EVA deck. Added foam thickness in the nose area keeps the board safe from potential boom front and mast hits. A harder and denser EVA around the whole perimeter of the board helps keeping the rails looking like new after a full season.

**ECO™ CONSTRUCTION** uses a combination of wood double sandwich, our number one renewable resource, and biaxial glass, where stability dictates it. This construction incorporates our latest performance research to create a strong, light and very smooth feeling board at a competitive price.
