#WindVision

A Life's Work With The Wind

A Life's Work With The Wind

I first built windsurfing sails of my own design 37 years ago, in 1979. The biggest lesson I've learned over the years? Is that **quality sail designs imitate nature**. The best - funnest, fastest, most multipurpose and easiest - sails to use are 'living wings' that animate our windsurfing experience. With the exception of the tuned-up Airscape, Blade FR and Raceboardblades, most **Loftsails 2017 designs are TOTALLY NEW** and reworked living wings - all with more lifelike behavior and the advantages that breathing, responsive foils deliver.

Wind Vision - The Monty Spindler Print Story Extract

"Fuller designs cannot be made flat through trim. In contrast, flat-profiled designs can morph to fuller foils with soft trim. Trim reactivity is essential for wide wind range ... rigged sails have two 'states'. 'Static' pre-wind - and the 'dynamic state' when filled with air - and in motion. The 'pre-wind', static state must anticipate the navigating, dynamic state. When hooking in, the profile settles - and shifts rearward. Designs that enjoy wide wind range must anticipate this rearward shift when underway, so that optimal profile is shifted into, rather than shifted away from."

Animated Rigs

The wholesale elements and natural behavior traits across this enhanced 2017 collection are:
Greater trim reactivity – and genuine wind range expansion.

How We Achieved This

The Loftails R&D team was expanded last year – and, most importantly, the **development program was brought back to Loftails’ roots in Tarifa**. I’m now blessed and super confident that we have two excellent, full-time versatile windsurfers testing together here in Andalucía in Ramon Pastor and Fernando Martinez. Both riders are elite-level wave riders and racers familiar with the intricacies of slalom, Formula and Raceboard discipline demands as well as accomplished freestylers. We also have Erik Beale as our Speed Team and Speed Program Manager and are always grateful for the large numbers of locals and visiting pros that come to Tarifa to train and join in the testing process. Intensive 2017 development work with the core group resulted in new curve schedules/profiles that have animated Loftails 2017 rigs to a whole new level. Ramon Pastor and Fernando Martinez are a powerful development cell and together we have created rigs that are greater than the sum of the parts. At this stage I simply couldn’t be more proud of our work to date.

Honor and Integrity

Loftsails truly has a unique family feel and **I cannot describe the satisfaction I get when our work is rewarded with great results and test-winning reports,** because, in a world of bold claims and broad statements, it's vital that our product descriptions retain integrity and are proven by 3rd parties to be true. Thank you for your continued support and shared passion in Loftsails designs.

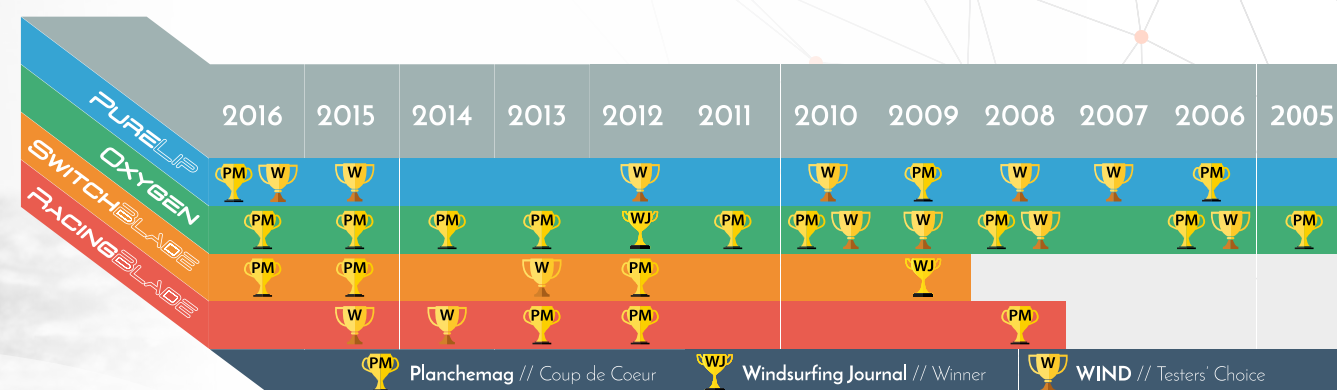

Good winds.

Monty Spindler

What's New

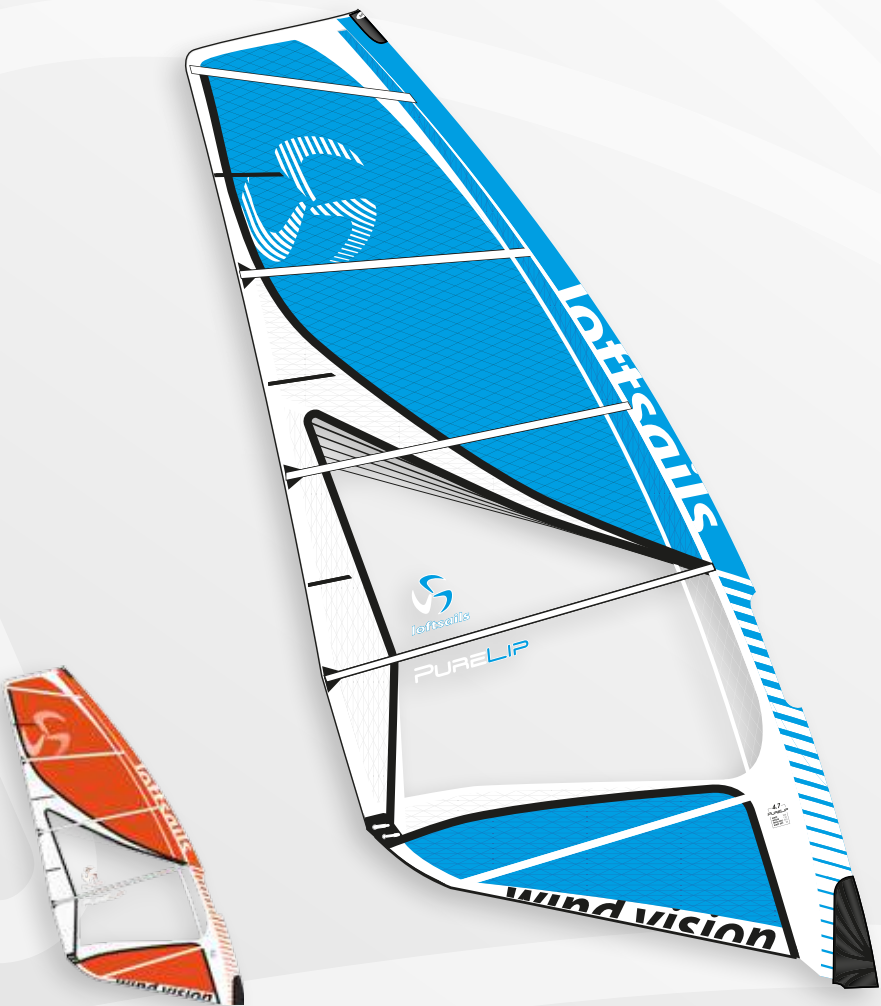

- Fresh, updated, Mast Program
- Purelip (Testers' Choice Wind Mag 2016, Coup de Coeur Planche Mag 2016)
- Wavescape
- Windscape "ALL NEW" Budget wave/improvers sail
- Switchblade (Coup de Coeur Planche Mag 2016, Highly acclaimed Windsurf UK)
- Oxygen (Coup de Coeur Planche Mag 2016)
- Racingblade

HARDCORE WAVE

PURELIP

With totally new design parameters for 2017, the all time classic Purelip - again a test winner, scooping both Coupe de Coeur in Planche Mag AND Testers' Choice in WIND mag in 2016 - delivers further expanded trim reactivity and effective range of use with a softer, easier character. LoftSails reduced the boom lengths on the larger sizes while increasing that aspect ratio on the smaller models. The profiles are deeper for 2017, complementing the luff curve updates that Monty Spindler and his all new test team in Tarifa have made. The result is further stability and increased multipurpose suitability for the wide spectrum of conditions you may encounter on any given day at the beach. Build quality is a given with all Spindler-designed sails and the all x-ply construction, 5-mm. foot and 4-mm.-biax window panels will withstand a ton of abuse and forgive mistakes as you push your level. Mag tests keep confirming the crossover/bump 'n jump and light-wind wavesailing prowess on the larger sizes while praising the stability and ease of use of the smaller sizes in harsh conditions (especially for lighter riders). 90% of wave sailors would need very specific, strong reasons not to select a quiver of Purelips for radical sailing in either tough conditions or epic surf.

FEATURES & BENEFITS

- Light and tough Integrated Panel Concept (IPC), 3-layer head/tack/clew radials - Connect the rugged X-Ply body for ultimate resistance to heavy surf environments
- Unique, super durable full IYU250 4-part mast-pocket construction - The perfect material between your mast and the elements
- Exclusive 3.5-mm. Biax upper body panels - Resists damage from impacts and UV and reduce weight
- 4-mm. Biax window panels - Durable visibility
- RDM recommended. SDM compatible - Both mast types fully compatible to maximize your windsurfing .
- 5-mm. Triax-laminate foot panels - Built to excel in all kinds of radical conditions
- Triple foot and triple reinforced luff construction - For maximized longevity
- Modified shape profile - For expanded tuning range and added forgiveness and stability. Higher aspect ratio in larger sizes, lower aspect ratio in high-wind models for added control
- Forward-profile batten systems with Standing Battens at specific locations - For responsive, low-end drive and easy upper end handling
- Dual clew eyelets with webbings - Adjust your leech-release character to suit your sailing conditions

MANOEUVRE WAVE 4-BATTEN

WAVESCAPE

Monty Spindler gave the 4-batten LoftSails Wavescape an entire redesign for 2017. Based on the amazing 'breathing' shape parameters perfected in the new Purelip, this dynamic foil delivers extremely compact, radical handling. The bottom batten is now repositioned under the boom for a more vigorous sensation with the leech freed up to react and adapt in moves, while the foot profile is steady and reliable and retains drive for the most radical turns. The aspect ratio is slightly reduced overall for added throwaboutability, all with the familiar light, direct, explosive feel and early-planing benefits that magazine testers worldwide loved so much. Naturally LoftSails have maintained their standards of total x-ply construction that give the green light to push your level with confidence in their absolute durability.

FEATURES & BENEFITS

- Unique, super durable full IYU250 4-part mast-pocket construction - The perfect material between your mast and the elements
- Exclusive 3.5-mm. Biax upper body panels - Resists damage from impacts and UV and reduce weight
- 4-mm. Biax window panels - Durable visibility
- RDM recommended. SDM compatible - Both mast types fully compatible to maximize your windsurfing experience.
- 5-mm. Triax-laminate foot panels - For steadier handling and added drive in turns
- Triple foot and triple reinforced luff construction - For maximized longevity
- Modified shape profile - For expanded tuning range and added forgiveness and stability. Higher aspect ratio and modified foot batten position for extra sensation and freer leech for improved dynamic handling
- Forward-profile batten systems with Standing Battens at specific locations - For responsive, low-end drive and easy upper end handling
- Dual clew eyelets with webbings - Adjust your leech-release character to suit your sailing conditions

SAILS

AIRSCAPE

DEDICATED FREESTYLE SAIL

AIRSCAPE

An out-and-out no-compromise, dedicated freestyle sail that's agile, quick and reactive. The smooth-handling, ultra-light LoftSails Airscape has explosive power, wide wind range and reliable stability in an easy ducking, perfect-to-pop package. The low-end drive is superb thanks to soft forward profile that tames gusty wind with outstanding behavior when overpowered. LoftSails' core test team, in their spiritual home of Tarifa - known for challenging freestyle conditions - specified a higher clew and slightly shorter boom for the 2017 edition and signed off on the superior new 3.5-mm. biax cloth that clearly boosted the foils integrity in the full spectrum of wind and water conditions. If you're hunting for a featherweight, ultra responsive and rapidly accelerating rig that goes neutral for the most acrobatic freestyle windsurfing moves then we recommend the LoftSails Airscape for you.

FEATURES & BENEFITS

- Dacron luff panel reinforced with integrated Kevlar strip - For soft rotation action with shape stability and go-neutral behavior
- Unique, super durable full IYU250 4-part mast-pocket construction - The perfect material between your mast and the elements
- Exclusive 3.5-mm. Biax upper body panels - Resists damage from impacts and UV and reduce weight
- 4-mm. Biax window panels - Durable visibility
- RDM recommended. SDM compatible - Both mast types fully compatible to maximize your windsurfing experience.
- 5-mm. Triax-laminate foot panels - For steadier handling and added drive in turns
- Triple foot and triple reinforced luff construction - For maximized longevity
- Modified shape profile - For expanded tuning range and added forgiveness and stability. Higher aspect ratio and modified foot batten position for extra sensation and freer leech for improved dynamic handling
- Forward-profile batten systems with Standing Battens at specific locations - For responsive, low-end drive and easy upper end handling
- Dual clew eyelets with webbing - Adjust your leech-release character to suit your sailing conditions

BUDGET WAVE/IMPROVERS FREERIDE

WINDSCAPE

All new for 2017 and with a pedigree derived from the dynamic mag-test-starring 4-batten Wavescape line, the Windscape is the vehicle to smoothly take your sailing from improver to expert by maximizing the fun and minimizing the hassle on the way. Light and manoevrable, with a forgiving, flatter profile for easy, energy efficient handling, the Windscape delivers the classic Loftsails traits of wind range and sensational comfort - characteristics that are vital for any level of windsurfer. The Windscape is for the newly hooked, ambitious rider seeking value and lifespan from a sail to carry them on the exciting journey awaiting those with a fresh obsession with the best sport in the world. From beachstarts and waterstarts, though mastering planing and well beyond those first jumps, rides and tricks, nothing will hold you back!

FEATURES & BENEFITS

- Lightweight film construction for agile handling
- 4-batten layout - maximizes stability with minimal weight
- Unique, super durable full IYU250 4-part mast-pocket construction -
The perfect material between your mast and the elements
- RDM recommended. SDM compatible -
Both mast types fully compatible to maximize your windsurfing experience.
- Forward-profile batten systems with Standing Battens at specific locations -
For responsive, low-end drive and easy upper end handling

OXYGEN

NO-CAM FREERACE

OXYGEN

The big lungs just got bigger! The zero-cam Loftails Oxygen's consistently won magazine tests since the first models were released back in 2002, when Loftails originally launched with a bang. 2016 was no exception with more test-winning Coup de Coeur honors from the rigorous Planche Mag test program. The secrets to the 2017 editions advances lie in new vertical shape schedules that improve stability and widen the range of trim reactivity beyond what genius designer Monty Spindler previously thought possible. Superb low-end 'lungs' have made the Oxygen famous for it's low-end effectiveness. Now it's the top end that the 2017's shape definition has enriched. Outright speed, stability and efficient handling for long, satisfying sessions are what make the Oxygen so popular and such a threat to it's camber-induced rivals - all with the ease of use and rigging of a typical freeride sail. Now using material advances made in the Loftails race-sail ranges, the Oxygen's re-worked upper body construction augments that top-end pace and comfort even further. We challenge you to find a more fun and rewarding sail to blast on!

FEATURES & BENEFITS

- Unique, super durable full IYU250 4-part mast-pocket construction -
The perfect material between your mast and the elements
- Exclusive 3.5-mm. Biax upper body panels -
Resists damage from impacts and UV and reduce weight
- 5-mm. Triax-laminate foot panels - For steadier handling and added drive in turns
- Forward-profile batten systems with Standing Battens at specific locations -
For responsive, low- end drive and easy upper end handling
- Dual clew eyelets with webbings - Adjust your leech-release character to suit your sailing conditions
- RDM recommended. SDM compatible -
Both mast types fully compatible to maximize your windsurfing experience.
- Cross batten with leech extension batten and clew layout -
Connects the boom to the batten structure, and promotes lower leech twist for upper-end ease

SWITCHBLADE

The Loftsails Switchblade is the easiest-to-use camber-induced sail on the market. Famed for its energy-efficient 'elasticity', the 2016 Switchblade once again proved to be the reference for freerace sails by winning the prestigious Coupe de Coeur title in Planche Mag. With the stability of cams and easy-to-access performance, the Switchblade poses a genuine threat to dedicated slalom sails - and is even PWA registered - with many lighter pros and national-level racers preferring the concentration gains and energy saved by using a more manageable foil in serious competition environments. Renowned as having the widest range of its class, the Switchblade transforms from low-end powerhouse into a top-end thoroughbred racing weapon thanks to a broad tuning band applied mainly via downhaul. Since Monty Spindler applied advances made in the speed and racing programs to the 2017 edition, the Switchblade has taken a step further with new materials and totally re-worked profiles that expand trim reactivity significantly with stunning effect.

FEATURES & BENEFITS

- Tube battens - Stability for your upper end
- Slick Tekcam2 rotation. (Tekcam2 Large for SDM also supplied) - Easy cam rotation makes your windsurfing experience more enjoyable.
- Metallic cam interfaces - MCLs eliminate contact point degradation characteristic of cam designs without MCLs
- Centered battens in X-Ply sleeves. (Alternate pocket sides) - Using similar material for the batten pocket as the body material minimizes asymmetric character of Dacron batten pocket construction that, due to Dacron stretch, allows the batten to stay on the sail side. Pockets made with laminate pockets force the batten to stay centered. This is important to keep the sail symmetrical. If all batten pockets are Dacron, and mounted on the same side of the sail, the sail will want to stay on one tack more than the other, rotate to one side easier than rotation to the other side. Loftsails X-Ply batten pockets that alternate sides limit asymmetric character.
- Streamlined neoprene boom cutout with dual zippers - limits water entry into the mast sleeve during falls, keeping the rig light for a fast recovery
- Unique, super durable full IYU250 4-part mast-pocket construction - The perfect material between your mast and the elements
- Exclusive 3.5-mm. Biax upper body panels - Resists damage from impacts and UV and reduce weight
- 5-mm. Triax-laminate foot panels - For steadier handling and added drive in turns

NO-COMPROMISE SPEEDSAILING

SPEEDBLADE

Loftsails Speedblades are highly efficient and comfortable. At the 2015 Luderitz event Speedsailing legend - and LoftSails Speed Product and Speed Team Manager - Erik Beale broke his all-time PB 5 times, proving the 2016 edition's progress on deep downwind courses following controlled testing in Tarifa - that has all built on the renowned, Luderitz 2015 winning design. The fact that Erik Beale was the fastest-per-kilo-of-bodyweight male competitor in Namibia proves the Speedblades efficiency in a range of conditions.

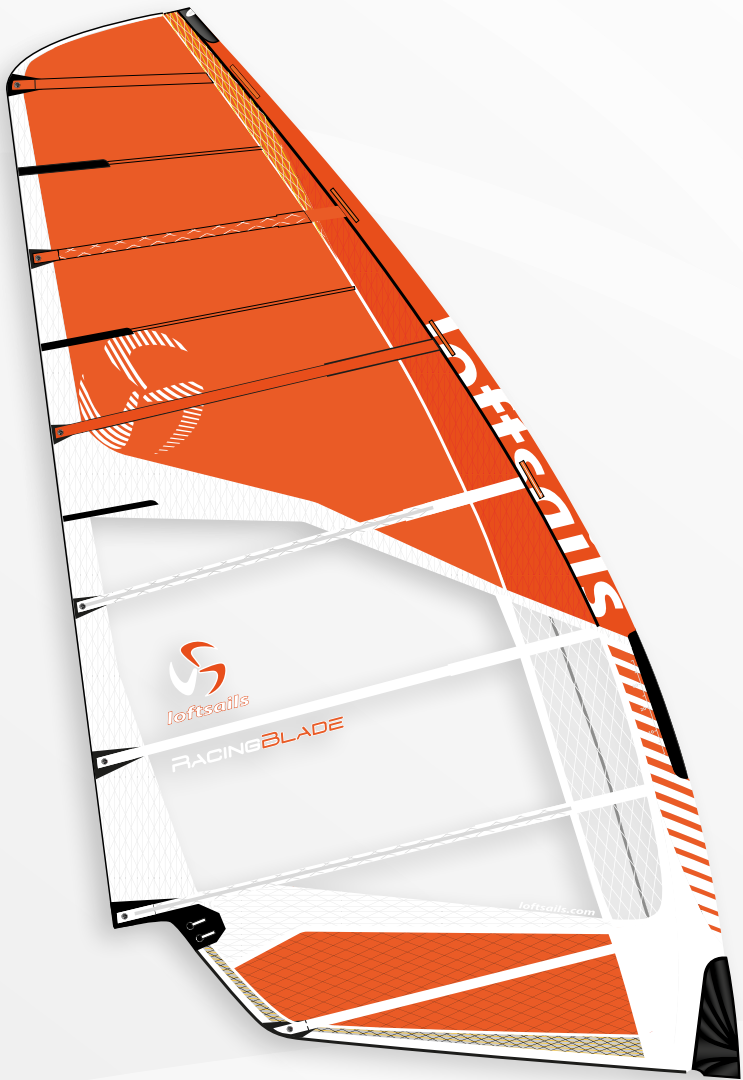

FEATURES & BENEFITS

- Internal vertical and horizontal Kevlar strip applications at cams - Maintain stability and define shape profiles
- Blade mast-pocket construction features mast panel and 2-mm. Triax mast-pocket sides (3 layers) that are tensioned directly (all 3 layers under tack pulley webbings) - Therefore downhaul tension is equalized between the mast panel and the mast pocket, resulting in the Speedblade's firm, clean, easy-rotating leading edge
- Blade mast-pocket construction - Equalized loading between the mast panel (interior) and the pocket (exterior) - The result is tensioned, firm mast pockets, exceptional durability, rotation ease
- 4-mm. Dimension Polyant monofilm body panels - proven superior performance
- Tubed battens with varying carbon content according to performance. The top 3 are specialized 100% carbon tubes - Carbon tubes deliver superior stiffness to maximize stability for your upper end
- Slick Tekcam2 rotation. (Tekcam2 Large for SDM also supplied) - Easy cam rotation makes your windsurfing experience more enjoyable.
- Metallic cam interfaces - MCIs eliminate contact point degradation characteristic of cam designs without MCIs
- Centered battens in X-Ply sleeves. (Alternate pocket sides) - Using similar material for the batten pocket as the body material minimizes asymmetric character of Dacron batten pocket construction that, due to Dacron stretch, allows the batten to stay on the sail side. Pockets made with laminate pockets force the batten to stay centered. This is important to keep the sail symmetrical. - If all batten pockets are Dacron, and mounted on the same side of the sail - the sail will be biased to one tack and rotate unevenly. LoftSails X-Ply batten pockets that alternate sides limit asymmetric character.
- Streamlined neoprene boom cutout with dual zippers - limits water entry into the mast sleeve during falls, keeping the rig light for a fast recovery
- RDM/SDM compatible - Both mast types fully compatible to maximize your windsurfing experience.
- 7-mm. monofilm vertical internal panel (inside mast-pocket) - For profile stability

SLALOM UNLIMITED

RACINGBLADE

Excess Speed Guaranteed. Loftails 2017 Racingblade has several subtle modifications that add up to n extra gear in your slalom performance. Planche Mag (FRA) awarded the Racingblade 2016 with a 10+ for maximum speed that proves its capability versus rivals. For 2017 the Racingblade has been redesigned with seam curve profiles that shift deeper profiles around the boom area that push in greater low-end power and added acceleration. The new 2017 designs are also more reactive to trim variation. Additionally the 2017 construction places 7-mm. monofilm into the upper rear mast panels (inside the mast pocket) that limits luff elongation to the upper forward sections of the sail. This provides stability and delivers superior performance, especially in maxed conditions.

FEATURES & BENEFITS

- Internal vertical and horizontal Kevlar strip applications at cams - Maintain stability and define shape profiles
- Racingblade mast-pocket construction features mast panel and 2-mm. Triax mast-pocket sides (3 layers) that are tensioned directly (all 3 layers under tack pulley webbings) - Therefore downhaul tension is equalized between the mast panel and the mast pocket, resulting in the Racingblade's firm, clean, easy-rotating leading edge

BLADEFR

FORMULA RACING MACHINE

BLADEFR

Loftsails have a long and proven history in Formula racing - including Dennis Littell's incredible 10th successive titles. With windward/leeward racing in mind the BladeFR is the master upwind and a true force on deep downwind legs. Monty Spindler's magic on the leech flexibility and release along with careful material selection deliver impressive wind range and stability for dedicate racers looking for impressive acceleration and control, especially in gusty conditions.

FEATURES & BENEFITS

- Internal vertical and horizontal Kevlar strip applications at cams - Maintain stability and define shape profiles
- Blade mast-pocket construction features mast panel and IYU 250 mast-pocket sides (3 layers) tensioned directly- all 3 layers under tack pulley webbings, therefore downhaul tension is equalized between the mast panel and the mast pocket, resulting in the Blade FR's firm, clean, easy-rotating leading edge.
- Blade mast-pocket construction - Equalized loading between the mast panel (interior) and the pocket (exterior) - The result is tensioned, firm mast pockets, exceptional durability, rotation ease
- 4-mm. Dimension Polyant monofilm body panels - proven superior performance
- Tubed battens with varying carbon content according to performance. The top 3 are specialized 100% carbon tubes - Carbon tubes deliver superior stiffness to maximize stability for your upper end
- Slick Tekcam2 rotation. (Tekcam2 Large for SDM also supplied) - Easy cam rotation makes your windsurfing experience more enjoyable.
- Metallic cam interfaces - MCLs eliminate contact point degradation characteristic of cam designs without MCLs
- Centered battens in X-Ply sleeves. (Alternate pocket sides) - Using similar material for the batten pocket as the body material minimizes asymmetric character of Dacron batten pocket construction that, due to Dacron stretch, allows the batten to stay on the sail side. Pockets made with laminate pockets force the batten to stay centered. This is important to keep the sail symmetrical. - If all batten pockets are Dacron, and mounted on the same side of the sail - the sail will be biased to one tack and rotate unevenly. LoftSails X-Ply batten pockets that alternate sides limit asymmetric character.
- Streamlined neoprene boom cutout with dual zippers - limits water entry into the mast sleeve during falls, keeping the rig light for a fast recovery

PURE RACEBOARD COMPETITION

RACEBOARDBLADE

The LoftSails Raceboardblade (9.5 & 8.5) has serious pedigree, twice used to win the World Championships (Fernando Martinez, Alex Buchau). This specialist discipline involves providing power and lift for course-racing hulls, (longboards with centerboards) with specific designs for upwind drive and extreme pointing in displacement mode from ultra-light wind to moderate breeze conditions - and full-planing downwind legs. LoftSails Raceboardblade has a full bodied, low-end power source with superb, streamlined and efficient trim reactivity for the top end of the wind range-of-use. The 6-batten LoftSails Raceboard Blade enables accessible, competitive course racing and the Raceboard Blade 9.5 LW (Light Wind) is a 5-batten design with all monofilm construction and 3 Tekcam2s for the best-possible light-to-medium-wind performance.

FEATURES & BENEFITS

- Internal vertical and horizontal Kevlar strip applications at cams - Maintain stability and define shape profiles
- Centered battens in X-Ply sleeves. (Alternate pocket sides) -
Using similar material for the batten pocket as the body material minimizes asymmetric character of Dacron batten pocket construction that, due to Dacron stretch, allows the batten to stay on the sail side. Pockets made with laminate pockets force the batten to stay centered. This is important to keep the sail symmetrical. -
If all batten pockets are Dacron, and mounted on the same side of the sail -
the sail will be biased to one tack and rotate unevenly.
LoftSails X-Ply batten pockets that alternate sides limit asymmetric character.
- Slick Tekcam2 rotation. (Tekcam2 Large for SDM also supplied) -
Easy cam rotation makes your windsurfing experience more enjoyable.
- Metallic cam interfaces - MCIs eliminate contact point degradation characteristic of cam designs without MCIs
- 4-mm. Dimension Polyant monofilm body panels - proven superior performance
- Tubed battens with varying carbon content according to performance. The top 3 are specialized 100% carbon tubes -
Carbon tubes deliver superior stiffness to maximize stability for your upper end
- Blade mast-pocket construction - Equalized loading between the mast panel (interior) and the pocket (exterior) -
The result is tensioned, firm mast pockets, exceptional durability, rotation ease
- Raceboardblade mast-pocket construction features mast panel and 2-mm.
Triax mast-pocket sides (3 layers) that are tensioned directly (all 3 layers under tack pulley webbings) -
Therefore downhaul tension is equalized between the mast panel and the mast pocket,
resulting in the Raceboardblade's firm, clean, easy-rotating leading edge

TEAM EDITION C100 RDM

Loftsails Team Edition masts are focused on achieving the best possible response for the least possible weight, without compromising durability. In high-performance sails, reaction and reflex are critical and having that pre-set, intended behavior pre-set and consistently replicated in all diameters and sizes of the mast program is the number one requirement in complementing their test-winning sails. Using the best possible T700 and T800 carbon fibers and pre-preg (pre-impregnated with resin for the best possible quality vs. traditional wet layup processes) methods, Loftsails autoclave-cured process delivers the highest standard of tensile strength, impact/friction protection and responsive flex available - all from a bespoke, dedicated program - unlike many brands that rely on off-the-shelf OEM products alone. (All Loftsails masts are Constant Curve.)

TEAM EDITION C100 SDM

Loftsails Team Edition masts are focused on achieving the best possible response for the least possible weight, without compromising durability. In high-performance sails, reaction and reflex are critical and having that pre-set, intended behavior pre-set and consistently replicated in all diameters and sizes of the mast program is the number one requirement in complementing their test-winning sails. Using the best possible T700 and T800 carbon fibers and pre-preg (pre-impregnated with resin for the best possible quality vs. traditional wet layup processes) methods, Loftsails autoclave-cured process delivers the highest standard of tensile strength, impact/friction protection and responsive flex available - all from a bespoke, dedicated program - unlike many brands that rely on off-the-shelf OEM products alone. (All Loftsails masts are Constant Curve.)

EAN-13 Barcode	SKU	Masts	Public Price
