

PROVEN PRO RACING PERFORMANCE. ➤

The proven performance of the REFLEX has been maintained with limited changes made to materials and shaping. The sails have evolved further with refined key design improvements but with the same race sail performance continued.

REFLEX II FEATURES: ➤

- ❶ Additional **Reflex Tensioner** on the batten through the boom encourages the lower leech to open under load; reducing drag and improving acceleration.
- ❷ **Sleeve Profilers** smooth the transition of the sleeve into the sail body resulting in a more efficient laminar airflow and reduced drag.
- ❸ **Dropped Clew** with offset Integrated Looped Outhaul to further extend the tuning. Upper hole for light wind performance and heavier riders, the lower hole for increased control in strong winds and lighter riders.

Rotation is smoother and easier through new shaping, luff curve and new hardware configuration.

Improved upwind and across the wind ability through finer entry profiles.

Durable batten construction with ease of replacement parts.

Reduced weight and swing weight with lighter head and leech construction and lighter battens
